testimonial

*“I have always wanted to increase the size of my breasts but did not want any implants. When I heard that it was possible to remove fat from an one area and put it in the breasts I immediately contacted Dr. Cappiello. It was the best decision I ever made. I went from an A cup to a C cup and got rid of all of the fat on my abdomen and thighs. I love my new bigger breasts best of all, I don't have implants!” - *JK**

safe natural breast augmentation without implants

Fat injection is a safe, cutting-edge surgical procedure for breast enlargement. It is also known as “autologous fat transplantation” and “microlipoinjection.”

It uses your own fat – unwanted fat from other parts of your body – for re-contouring. Removing fat from the body has become the goal of many people trying to achieve a more desirable figure. Now why would someone want to get rid of fat, only to have it reintroduced back into other areas of their body?

Breast enlargement without implants!

Human fat is an excellent natural filler. In many cosmetic procedures, it can be used to sculpture body areas. You can achieve the desired shape and enhance your appearance.

how are fat injections performed?

Fat for transfer to the breast is usually taken from the abdomen or thigh. Pain is minimal. Local anesthesia is used where fat is removed and where fat is reintroduced. The fat is withdrawn using techniques similar to liposuction. It is then treated and injected back into the needed areas. Fat transfer can also be used in many other body areas in addition to the breasts.

advantages of fat injection

Breast enlargement by fat transfer is fast – taking only a few hours in most cases. Recovery is also shorter and easier than after an implant surgery.

Since the fat used for injections is harvested from your own body, any form of allergic reaction is prevented. Infection and complications from this form of breast enlargement are very rare.

Many women have an ample fat supply to achieve the volume of enhancement desired, using lipoinjection. So Dr. Cappiello can even do lipoinjections multiple times to achieve and maintain the desired aesthetic size and shape.
